Portfolio: jayesh-ux.github.io/jayesh-singh

Professional Summary

Full Stack Developer currently building FairPay Solution - a live debt advisory platform serving 700+ clients across India. Experience deploying Llama 3.3 70B, contributing to 96TB enterprise storage infrastructure, and building production-grade SaaS platforms (fintech, logistics, recruitment) on AWS. Demonstrating consistent shipping.

Technical Skills

Languages:	JavaScript, TypeScript, Python, Java, Kotlin
Frontend:	React, Next.js, TypeScript, Tailwind CSS, HTML/CSS
Backend:	Spring Boot, Django, Django REST Framework, Node.js, Express
Mobile:	Android (Kotlin)
Databases:	PostgreSQL, PostGIS, Supabase, MongoDB, MySQL
Cloud & DevOps:	AWS (EC2, Route 53, Lambda, S3), Vercel, CI/CD, Git
GIS & Mapping:	PostGIS, proximity-based geospatial queries, location tracking
AI & Automation:	n8n, Ollama, Langchain, Llama 3.3, model fine-tuning (Gemma Vision, TTS2)
Infrastructure:	On-premise server setup, storage architecture, GPU compute nodes, managed switching
Tools:	Bitrix24, n8n, Docker, REST APIs, OAuth, RBAC

Experience

FairPay Solution

2025 - Present

Full Stack Developer

- Architected the full platform end-to-end - frontend, backend, database, and cloud deployment.
- Integrated Razorpay payment gateway, Google OAuth, RBAC, and admin dashboard for client management.
- Built SMS/email automation for client communication and follow-up workflows.
- Tech stack: Next.js, React, Supabase, PostgreSQL, Razorpay API, Vercel.

Rajlaxmi Solutions Pvt. Ltd. & Averlon Technologies

March 2026 - April 2026

Full Stack Developer

- Worked on **Hire2Onboard**, a recruitment platform, and re-architected it from a single-company architecture to a **multi-company architecture**.
- Implemented company-level separation and scalable multi-company data handling, and **delivered the completed architecture** during the engagement.
- GeoTrack** - Proximity-based GPS verification and logistics tracking platform. Architected backend APIs and integrated PostGIS caching, reducing external map API costs by ~40%. Built with Node.js, GIS spatial queries, and real-time location tracking.
- TrustLayer** - Verification and trust platform for recruitment workflows. Full-stack development with TypeScript frontend and cloud-deployed backend services.
- OfferGhost & Recruitment Platforms** - End-to-end hire-to-onboard pipeline (backfronthire2onboard, pricinghire2onboard, recruit). Built with Python backend and TypeScript/React frontend.
- GST Billing Management System** - Full-stack billing platform with authentication, invoice generation, and cloud deployment.
- Android Development** - Built Kotlin-based Android application (kindareadyapp) for logistics workflows.
- Technical coordination across product teams, system architecture decisions, database design, and AWS deployment management.

Qyuki Digital Media Pvt. Ltd. / DeepSoch AI

September 2025 - October 2025

Full Stack Engineer Intern

- Architected internal dashboards and scalable web applications for DeepSoch AI, MotorBeam, ViralBollywood, and Qyuki using Next.js, Django, and Spring Boot.
- Deployed and fine-tuned Llama 3.3 70B for international clients, contributing to end-to-end model training pipelines across Indic and English language variants.
- Engineered REST API integrations with secure authentication and optimized database operations.
- Collaborated with the CTO to set up on-premise enterprise infrastructure including 96TB storage array and managed switching hardware, reducing cloud API dependency and inference costs.
- Fine-tuned Gemma Vision and Index TTS2 AI models; automated Ollama deployment pipelines via n8n, reducing manual processing time.
- Assisted in building custom compute nodes with RTX 3090 GPUs, achieving ~\$60/month electricity profile for global AI inference workloads.
- Benchmarked GPU vs. CPU FFmpeg acceleration and Whisper Transcribe for video processing optimization.
- Contributed to resource-optimized architecture decisions that lowered operational costs versus cloud-only alternatives.

Key Projects

Hire2Onboard - Recruitment Platform

Recruitment platform where the architecture was migrated from single-company to multi-company, enabling scalable company-level separation and workflows. The multi-company architecture was delivered during the Rajlaxmi Solutions Pvt. Ltd. & Averlon Technologies engagement.

Stack: Multi-company architecture, TypeScript, React, Python, PostgreSQL, REST APIs, RBAC

GeoTrack - Logistics & Proximity Verification

GPS-enabled logistics tracking platform with PostGIS-powered proximity caching. Reduced third-party API dependency through spatial database optimizations. Real-time location tracking, geofencing, and verification workflows.

Stack: Node.js, PostgreSQL/PostGIS, JavaScript, AWS | ~40% reduction in external map API costs via PostGIS caching layer

Recruitment Platforms (Recruit / TrustLayer / OfferGhost)

End-to-end recruitment and verification suite spanning candidate sourcing, verification, offer management, and hire-to-onboard pipeline. Multiple interconnected platforms sharing authentication and data layers.

Stack: TypeScript, Python, React, PostgreSQL, AWS

Career Grid - Job Portal

Full-stack job posting and analytics platform with Spring Boot microservices backend and Next.js frontend. Features OTP login, 2FA authentication, REST APIs, and AWS deployment.

Stack: TypeScript, Java/Spring Boot, PostgreSQL, AWS

Fair Pay Solution - Loan Settlement Platform

Production debt advisory platform serving 700+ clients. Features Razorpay payment gateway, Google OAuth, RBAC, SMS/email automation, and admin dashboard. Live at fairpaysolution.com.

Stack: Next.js, React, Supabase, PostgreSQL, Razorpay API, Vercel

Ambulance Dispatch & Rescue - Emergency Response Systems

Proof-of-concept emergency response platforms with real-time sensor integration, location tracking, alert workflows, and automated dispatch notifications.

Stack: TypeScript, Node.js, real-time APIs

KindaReady - Android Application

Kotlin-based Android application for logistics and readiness workflows.

Stack: Kotlin, Python

E-Commerce Platforms (frontecom, ECOMMERCE, ecomsanity)

Multiple e-commerce implementations spanning JavaScript/React and TypeScript frontends with Sanity CMS integration. Product catalogs, cart management, and checkout flows.

Stack: JavaScript, TypeScript, React, Sanity CMS

Education

B.E. in Information Technology	Mahatma Gandhi Mission, University of Mumbai (2024)
HSC	KM Agrawal College of Arts Science & Commerce

Certifications & Achievements

- Deployed and fine-tuned Llama 3.3 70B for international clients; contributed to 96TB enterprise storage infrastructure.
- Assisted in building custom RTX 3090 GPU compute node running at ~\$60/month electricity for AI inference.
- 27+ public repositories demonstrating consistent shipping of full-stack applications.
- ~40% API cost reduction through PostGIS spatial caching on GeoTrack platform.
- Achieved 100% SEO optimization score on production web applications.

Skills

Languages: JavaScript, TypeScript, Python, Java, Kotlin **Frontend:** React, Next.js, TypeScript, Tailwind CSS, HTML/CSS **Backend:** Spring Boot, Django, Django REST Framework, Node.js, Express **Mobile:** Android (Kotlin) **Databases:** PostgreSQL (PostGIS, Supabase), MongoDB, MySQL **Cloud:** AWS (EC2, Route 53, Lambda, S3), Vercel, CI/CD, Git **GIS:** PostGIS, proximity-based geospatial queries, location tracking **AI:** n8n, Ollama, Langchain, Llama 3.3, model fine-tuning (Gemma Vision, TTS2) **Infrastructure:** On-premise server setup, storage architecture, GPU compute nodes, managed switching **Tools:** Bitrix24, n8n, Docker, REST APIs, OAuth, RBAC.
